Cworkshop
provides sliding doors in bespoke
sizes using aluminium profiles
plus accessories for wardrobes
and interior partitions.

The product range consists of four different profiles in six colours with doors being available in many different design combinations. The entire product range is of high-quality and meets all the UK and European standards.

We are proud to say that we have a reputation of having high level of customer service and have taken this integral part of our philosophy to every aspect of our company's operations.

We ensure that our team consists of only competent and skilled professionals able to provide customers with the best products and excellent customer care.

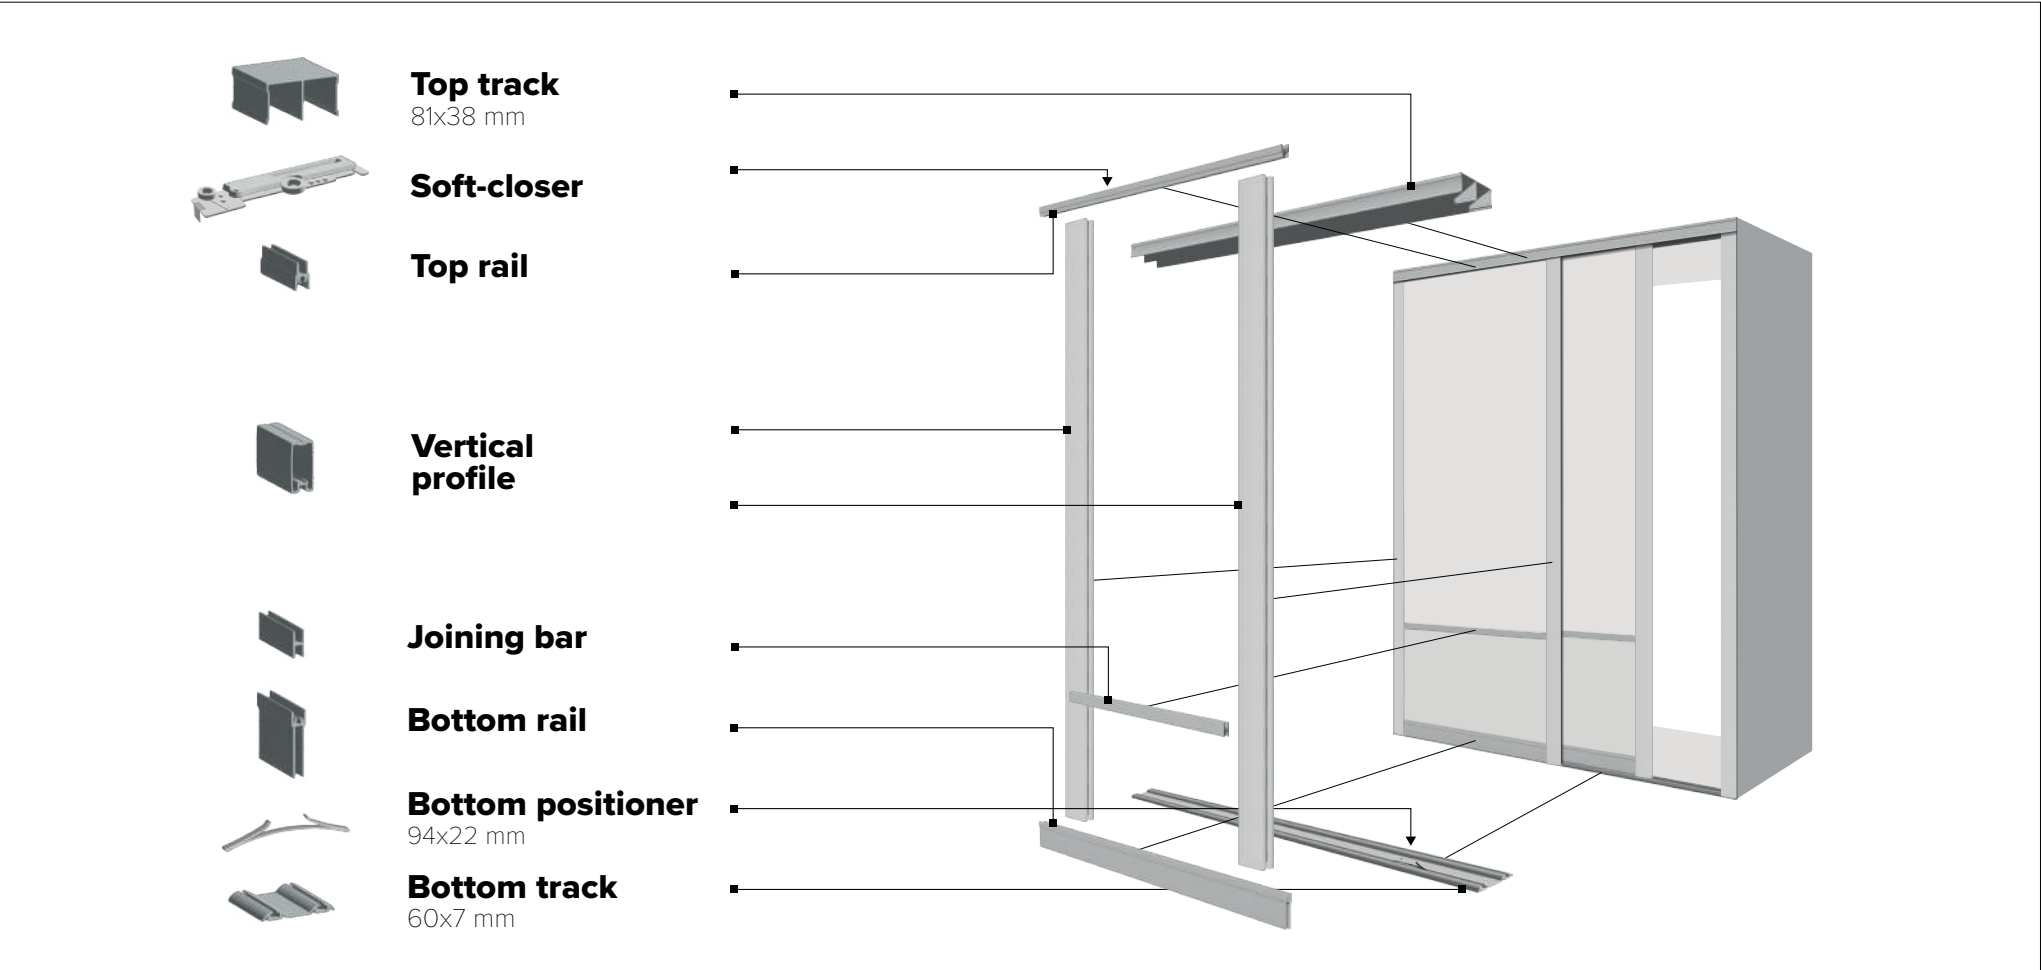

SLIDING SYSTEM

Our system is the result of combining the latest engineering research and the use of the most advanced technology in aluminium profile extrusion. We only use thick-wall profiles made of primary aluminium, which are anodized for longevity and colour stability.

The key component of our sliding doors are top and bottom rollers, both of which are equipped with a metal bearing that requires no lubrication and provide very quiet, smooth door running. Our rollers are characterised by high reliability and have very long life cycle. In fact, our roller system is expected to serve for up to 30 years and is capable of 110,000 cycles of door opening and closing. Individual sliding doors can be made up to 1250mm in width and 3000mm in height. Max door weight is 160kg.

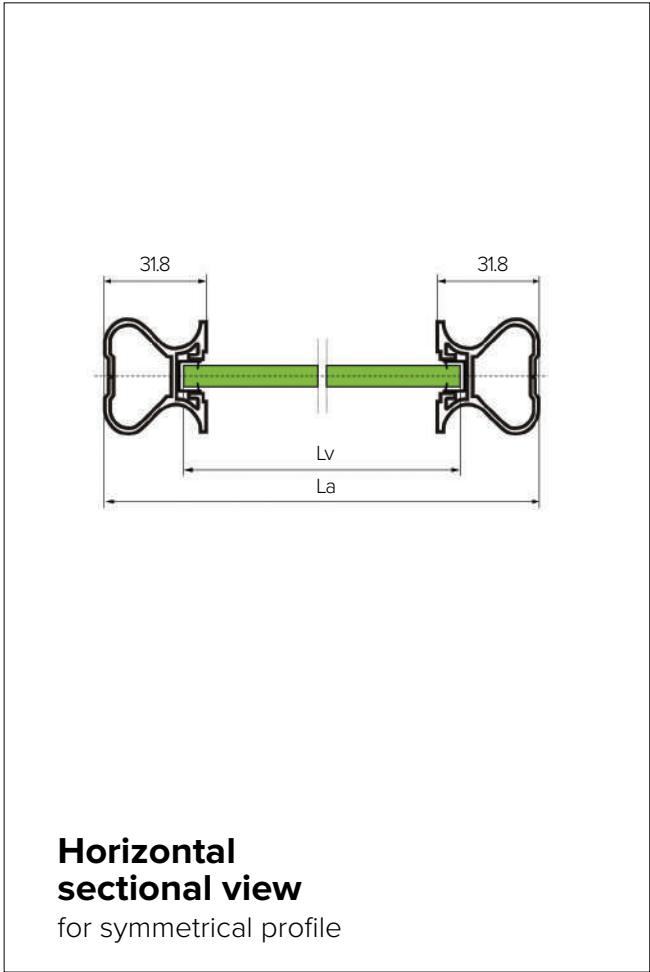

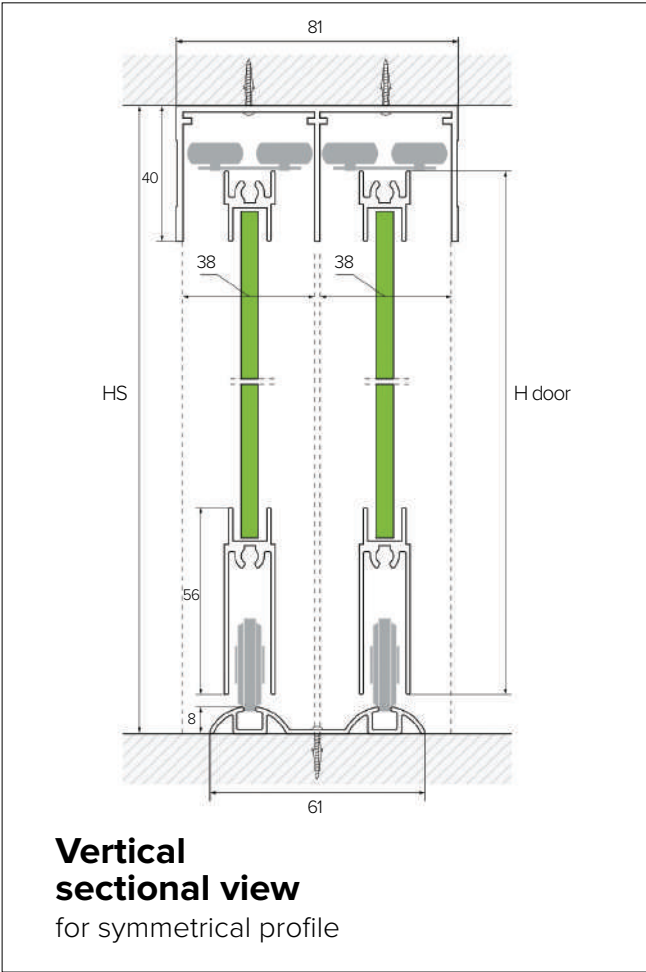

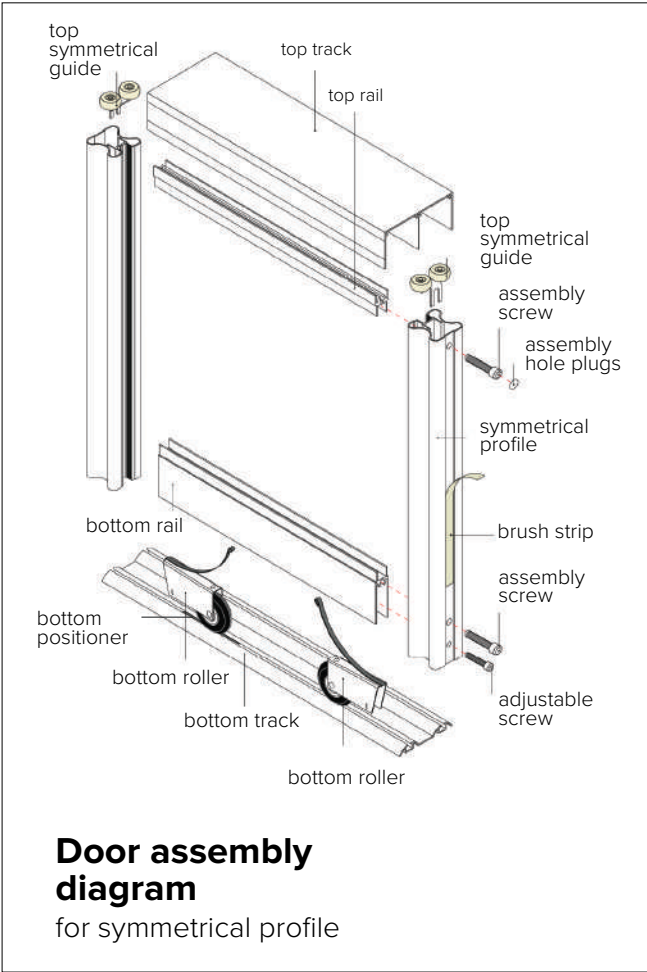

Constructed with aluminium profile and equipped with ball bearing roller mechanisms our sliding door system is a perfect example of the most advanced and innovated, yet simple and practical solution for sliding wardrobe doors.
