

# ACOUSTIC PANELS INSTALLATION GUIDE

## ASSEMBLY

Hotán® acoustic panels can be used on ceilings as well as walls.

It is recommended to mount the panels on 45 mm thick joists with a mutual distance of max. 600 mm. However, the panels can also be mounted directly to the wall. The screws are placed between the strips through the non-woven fabric. For fastening, a minimum of 15 flat head screws should be used per panel.

### Screw size:

at least  $\text{Ø}3.5 \times 35$  mm

#### NOTE

It is recommended to use black plasterboard screws to better hide screws in the black felt
